

25 WAYS TO BLOW HIS MIND WITH YOUR MOUTH

Keep defaulting to the same three tongue tricks? Time to up your game.

By Casey Gueren

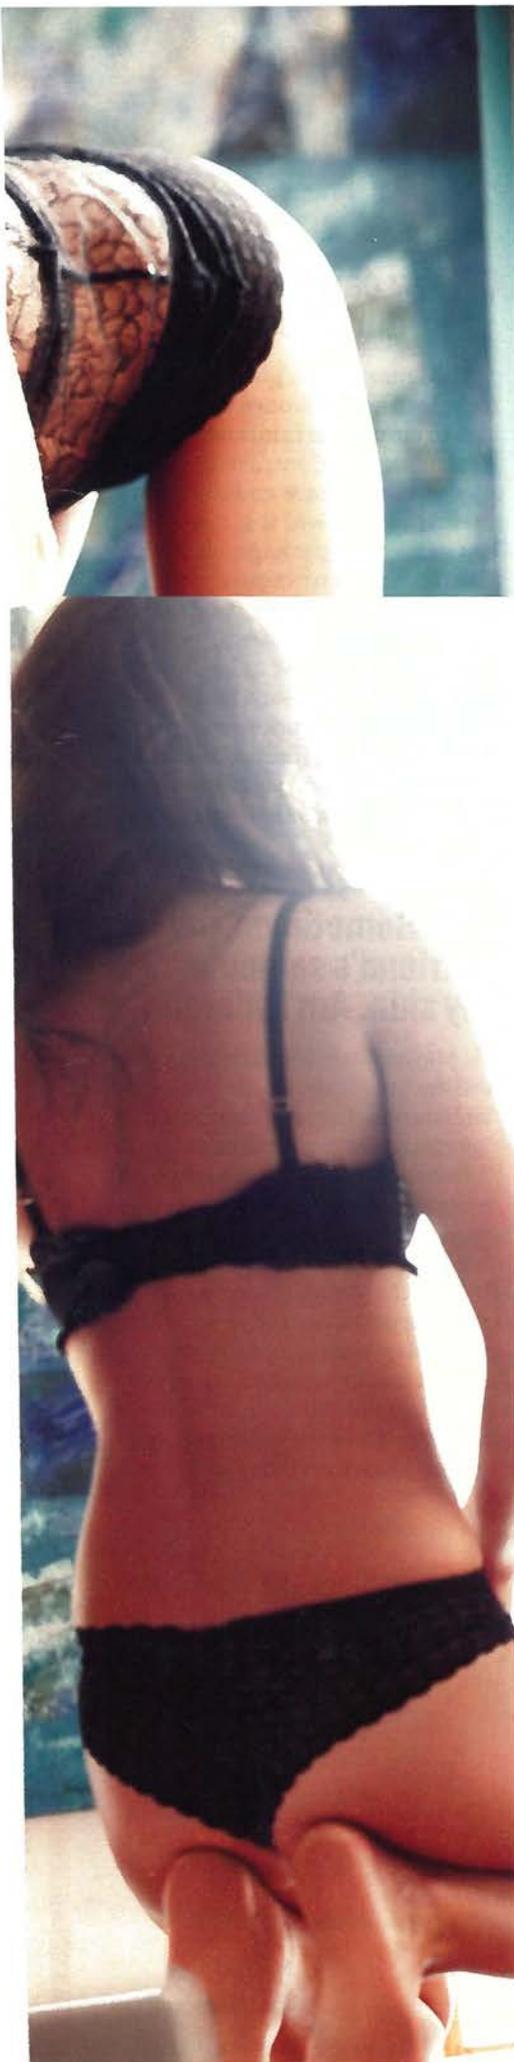

1 Run your lips along his hip bones while slowly making your way toward his package. There are a ton of nerve endings there that are craving more attention.

2 Let your mouth graze his ear when you whisper what you want him to do to you.

3 Take a sip of warm (not hot!) peppermint tea before going down on him. He'll love the tingly feeling, and he'll taste better.

4 TAKE A MAKE-OUT SESSION FROM GOOD TO GREAT BY SUCKING FIRMLY ON HIS TONGUE FOR A SPLIT SECOND.

5 With a flat tongue, lick the underside of his penis like an ice pop. A little porn star-ish? Yes. Still hot? Definitely.

6 Run your tongue around the ridge where the head of the penis is connected to the shaft (aka the corona). It contains about 80 percent of his erogenous tissue.

7 The next time you give your man downstairs action, keep this Cosmo fact in mind: Most men feel their balls are ignored during foreplay. Be the girl who reads his mind by lightly sucking where he wants it most.

8 While running your mouth down his chest, stop to kiss and nip around his pubic mound. Just like yours, it's an overlooked hot spot.

9 Cup his shaft in your palm, and place your mouth lengthwise on his penis. Move your head like you're playing a harmonica as you lick the sides. It's a totally different feeling.

10 The rule with teeth: Be *gentle*, and never move from side to side. A soft, pulsating nibble is erotic; an actual chomping is psychotic.

11 Surprise him with oral first thing in the morning when his testosterone is naturally jacked up.

12 Right as he's about to climax, increase pressure with your mouth (and hands). In the height of arousal, a firmer grip feels so good to him.

13 When he's lying on his stomach, straddle him and kiss your way down his backbone until you reach the base of his spine.

14 Suck on his earlobe, then trace your tongue along the outer ridge—it's a little-known erogenous zone.

15 Make a ring with your thumb and forefinger, and keep it close to your lips as you move up and down his shaft.

16 Before heading south, spend a little while on his inner thighs. Tease him by kissing and (very) softly biting this area.

17 When you're behind him, kiss the back of his neck, and swirl your tongue around to give him chills.

18 The area where the scrotum meets the perineum is ultra-sensitive. Press on this spot with your tongue. His erectile tissue extends all the way back there, so it'll give him a jolt of pleasure.

19 Make putting on a condom sexier. Unroll the tip and put that in your mouth, with the rolled part around your lips. Lean forward to place it over the head of his penis. Keep your lips firm to roll it down as far as you can go, then finish it at the base with your hands.

20 Lie on your back with your head hanging off the bed, and slide his penis into your mouth. It's a good way to reduce your gag reflex.

21 His nipples are just as sensitive as yours are. Swirl them around in your mouth, then make your tongue firm to flick the tip.

22 Plant feathery kisses on the skin behind his knees. We know it seems like a weird spot, but it's supersensitive.

23 Let out a soft moan while going down on him. Making noise changes the sensation for him and helps you relax your throat muscles, meaning you can take him in deeper.

24 Keep your tongue stiff as you slide it back and forth over his frenulum (the underside of the penis where the head meets the shaft).

25 Another tip for the frenulum: Cover your teeth with your lips, and lightly nibble on it.
